HEXAGONAL TELESCOPIC BOOMS Strong and light

1 Fassi manufactures its telescopic booms with unique hexagonal sections made in high-strength steel. The section of the telescopic booms is made from a single sheet of steel that is shaped to keep the weight low while at the same time obtaining significant lifting capacity. Boom extension is fluid thanks to a special valve that also leads to reduced friction between the telescopic extensions.

WORKING LIGHTS

2 Low-consumption, high-luminosity adjustable-direction LED working lights allowing for safe operation even in low-light conditions.

WINCH COMBINED WITH A PULLEY SYSTEM

3 A high-capacity winch installed inside the column and driven by an orbital motor. The winch guarantees repetitive lifting via a hook and steel cable and is equipped with an automatic device that controls and limits the winding and unwinding of the cable (hoist limit), guaranteeing the utmost operational safety.

* AUTOMATIC PULLEY FOLDING SYSTEM

The automatic pulley folding system at the tip of the crane is activated by rewinding the hoist, simplifying transportation operations and reducing the bulk of the pulley under the inner boom.

STANDARD CHARACTERISTICS AND EQUIPMENT

HYDRAULIC SLEW RING

4 The hydraulically operated slew ring guarantees constant crane rotation thanks to a small, compact slew ring that allows for more fluid performance when the machine manoeuvres and rotates over uneven terrain and in challenging areas with inclines of up to 5 degrees.

OPERATING LEVERS

5 The use of specific advanced control valves for the operating levers allows for optimal response when activated and extraordinarily precise control in all situations. The lever response speed can be adjusted according to requirements.

FX200 LOAD CONTROL

6 The electronic load condition control unit provides the operator with information to allow an assessment of the working conditions to subject the crane to, and sends a block command in the event of excessive overload.

AN EFFICIENT STABILISATION SYSTEM

7 A hydraulically extending stabiliser system that allows operators to choose between fixed and manual rotation, guaranteeing versatility and operating efficiency effectively adapted to the needs of the operator.

GENEROUS OIL TANK

8 A steel tank with a capacity of approximately 34,3 gallons for the XR710 and 26,4 gallons for the XR310, resistant to impact and to the corrosive effects of the elements, even in the most challenging of environmental conditions.

** COLUMN-MOUNTED CONTROL SEAT

An ergonomic seat in a safe position allows the operator to have full control during manoeuvres and lifting operations. The seat is fully adjustable to provide the most comfortable working position for the operator and is also available with heating.

*the automatic tip-mounted pulley folding system is available for the XR310 model only
 **the column-mounted control seat is available for the XR710 model only
